

Symptoms to be aware of after a restoration or temporary crown is placed.

1. Biting or chewing feels “off” or is uncomfortable or painful.
2. Tooth is extremely sensitive to cold or hot.
3. Tooth aches spontaneously or lingers.

If any of these symptoms occur it could mean that the restoration (fillings/crown/temporary crown) needs to be adjusted (material shaved off the biting surface). Please call the office as soon as possible to prevent further trauma.
